

Week 2 Quiz

TOTAL POINTS 10

1.	Machine learning is an "iterative" process, meaning that an AI team often has to try many ideas before coming up with 1 point omething that's good enough, rather than have the first thing they try work.		
	True		
	○ False		
2.	Say you want to use Machine Learning to help your sales team with automatic lead sorting. I.e., Input A (a sales prospect) and output B (whether your sales team should prioritize them). The 3 steps of the workflow, in scrambled order, are:	1 point	
	(i) Deploy a trained model and get data back from users		
(ii) Collect data with both A and B			
(iii) Train a machine learning system to input A and output B What is the correct ordering of these steps?			
	(ii) (iii) (i)		
	(i) (iii) (ii)		
	(1) (1) (11)		
	(11) (1) (11)		
3.	What are the key steps of a Data Science project?	1 point	
	○ Collect data		
	○ Analyze the data		
	○ Suggest hypothesis or actions		
	All of the above		
4	Machine Learning programs can help (relect all that apply)		
4.	Machine Learning programs can help: (select all that apply)	1 point	
	✓ Automate lead sorting in sales		
	Automate visual inspection in a manufacturing line		
	Customize product recommendations		
	✓ Automate resume screening		
5.	Unless you have a huge dataset ("Big Data"), it is generally not worth attempting machine learning or data science projects on your problem.	1 point	
	○ True		
	False		
6.	Say you want to build an AI system to help recruiters with automated resume screening. Which of these steps might be involved in "technical diligence" process? (Select all that apply.)	1 point	
	Making sure that an Al system can meet the desired performance		
	Making sure you can get enough data for this project		
	✓ Defining an engineering timeline		
	Ensuring that this is valuable for your business (e.g., estimating the project ROI)		
7.	Which of these statements about "business diligence" do you agree with?	4	
/-		1 point	
	Business diligence can typically be completed in less than a day.		
	Business diligence is the process of ensuring that the envisioned AI technology is feasible.		
	Business diligence is the process of ensuring that the AI technology, if it is built, is valuable for your business.		
	Duciness diligence applies only if you are launching new product lines or businesses		

8.	 You want to use supervised learning for automated resurn following statements about the Training Set are true? (Sele 		e 1 point
	☐ The Training set and Test set can be the same dataset	t.	
	It should give examples of the input A (resume) but no forward with a candidate).	ot necessarily the desired output B (whether to me	ove
	It will be used by the AI team to train the supervised le	earning algorithm.	
	It should give examples of both the input A (resume) a candidate).	and the desired output B (whether to move forwai	d with a
9.	 For your automated resume screening application, you are following statements about the Test Set are true? (Select a 		f the 1 point
	It will be used by the AI team to evaluate the perform	ance of the algorithm.	
	It should give examples of both the input A (resume) candidate)	and the desired output B (whether to move forwa	d with a
	☐ The Test Set should ideally be identical to the Training	g Set.	
	It should give examples of the input A (resume) but no forward with a candidate).	ot necessarily the desired output B (whether to me	ove
10.	10. Which of these are reasons that it's often unrealistic to exp	pect an ML system to be 100% accurate?	1 point
	You might not have enough data		
	Data can be mislabeled Data can be ambiguous		
	All of the above.
